

Powder coating is becoming a popular technique of applying paint onto various metals. **Scapa 2595 high temperature paper masking tape** allows you to create a superior finish from powder coating, while providing an efficient barrier between the coating and the masked surface.

For a superior
finish in
powder coating

A superior finish with powder coating

- Scapa 2595 ensures that the protected surface remains intact at all stages thanks to its temperature resistance of up to 200°C.
- A superior finish - powder coating results in superior consistency and uniformity of the finish without sags, drips, runs, or bubbles.
- Long-lasting hold - powder coated parts resist cracking, peeling, and marring.
- Clean finishing line - Scapa 2595 can easily be cut to the required shape.

Improve production speed and save costs

- No more costly cleaning - your processing speed is improved as Scapa 2595 leaves no residue when removed.
- Save time and costs after curing, as Scapa 2595 can be removed in one piece, meaning no extra effort or secondary operations are required.
- Re-usable product - most powder coating overspray can be retrieved and reused, significantly reducing waste.
